

Covid-19 Activity Risk Assessment

This document identifies the risks posed by Covid-19 to our members and outlines the control measures the club is implementing to protect the coaches, members and supports whilst attending the club sessions.

This risk assessment is to be used to analyse the potential hazards associated with karate practice, and to determine control measures to minimise risk.

- We have populated some common risks as a starting point, however, this does not represent an exhaustive set of risks and should be adjusted according to your assessment.
- The control measures listed are only proposed methods and should be adjusted as necessary.
- There may be crossovers with the Covid-19 Risk Assessment; duplication of information in this manner is appropriate.
- Control measures should form the basis of a **Covid-19 Activity Implementation Plan** to be distributed to club members.

Identified Risks	Control Measures	Action by (who?)	Done (✓)
